**Address**

**What are events?**

An event in SciLifeLab Training is a link to a single training event sourced by a provider along with description and other meta information (e.g. date, location, audience, ontological categorization, keywords, etc.).

Training events can be added manually or automatically harvested from a provider's website.

If your website contains training events that you wish to include in SciLifeLab Training, [see here for details on automatic registration](#).

**Locking fields**

Much of the content in SciLifeLab Training is retrieved and kept up-to-date via automated scrapers that pull information from public web pages and APIs in regular intervals.

To prevent SciLifeLab Training from overwriting a field you have changed, click the icon to lock the field.

Fields marked as will not be overwritten.
